Career Profile

Operations leader with over a decade in industrial robotics and autonomous systems, currently Head of Customer Support at Korial, progressing from field robotics engineering into building and running technical operations at scale.

Built and scaled a 24/7 customer operations function for an enterprise AI platform in autonomous industrial operations: SLA frameworks, incident response, and GTM pricing analysis for 20+ enterprise customers.

Also led the buildout and deployment of the AI platform behind that function, integrating tickets, documentation, telemetry, code, and logs to automate first response, speed up issue investigation, and improve operational reliability.

Work Experience

present **Korial GmbH (formerly Energy Robotics GmbH), Darmstadt, Germany**

Jan-2022 Joined at ~20 employees; now ~100+ · Enterprise AI platform for autonomous industrial operations · Global

Jan-2024 **Head of Customer Support**

Scale Built and scaled a 24/7 global customer operations function from 1 to 11, with capacity planning and capability development for 2,300+ customer tickets across a live fleet of ~100 safety-critical inspection robots spanning EMEA, APAC, and the Americas.

Platform Designed and deployed the production AI platform that runs customer operations: hybrid retrieval over vector search (Qdrant) and a knowledge graph (FalkorDB) across 10,000+ tickets, 1,300+ documents, and live fleet telemetry, with multi-model routing, an 8-dimension evaluation harness, and cost and quality observability.

Operating model Designed the customer operations model from zero: incident framework (Sev-1 to Sev-4), Gold/Silver/Bronze SLAs, on-call rotation, escalation paths, knowledge workflows, and post-incident reviews.

Performance Achieved average first-response time of 0.4h across the full support queue, a 3.5× improvement in six weeks through AI-assisted triage and automation, while maintaining SLA commitments across a global portfolio of 20+ enterprise customers.

Commercial Led the commercial analysis underpinning the company's GTM support pricing model: multi-scenario P&L modelling across SLA tiers, staffing models (Europe-only vs. Follow-the-Sun), and labour cost structures, directly informing pricing decisions and preventing launch of an unprofitable service tier.

Jan-2023 **Operations Project Manager**

Service delivery Ran the Human Robot Supervisor programme, delivering supervised robot operations for customers with the first two direct reports, owning customer and partner coordination for deployments.

Jan-2022 **Robot Operations Engineer**

Foundation Established customer support as its first and only member: ran customer demos, coordinated deployment logistics with partners, and hand-built the first ticket-handling automations.

Dec-2021 **Magazino GmbH**, *Munich, Germany*

Nov-2018 Robotics scale-up (autonomous mobile robots for intralogistics) · Acquired by Jungheinrich

Dec-2019 **Lead Robot Engineer**

Flagship project Owned the first TORU customer project as lead technical responsible on site, taking it from a 3-robot pilot to a fully autonomous system handling 15,000+ orders per week.

Product influence Initiated and authored the analysis of what was blocking operation of larger robot fleets, shaping a subsequent programme of product and reliability improvements.

Nov-2018 **Robot Software Engineer**

Field engineering Acted as technical interface between customers and engineering, translating field failures into product and reliability fixes.

Oct-2018 **ASTI Mobile Robotics**, *Burgos, Spain*

Nov-2016 Industrial robotics company specialising in AGVs · Acquired by ABB

Control and Automation Engineer

Control software Designed and deployed AGV control software across manufacturing, food processing, and logistics environments.

Practices Contributed to modernisation of development practices, introducing version control, coding guidelines, and Kanban-based workflows.

Sep-2016 **INDA S.L**, *Zaragoza, Spain*

Sep-2015 Early-stage UAV startup · **R&D Engineer** · Electrical hardware and embedded software for UAV prototypes.

Education

2005–2013 **MEng Industrial Engineering**,

Engineering and Architecture School, Universidad de Zaragoza, Zaragoza, Spain

Specialisation in Automation and Robotics.

2010–2011 **Erasmus Exchange Program**,

Tekniska Högskolan, Linköpings Universitet, Linköping, Sweden

Languages

Spanish Native

English Full professional proficiency

Cambridge English: Advanced (CAE)

German Professional working proficiency

B2 Goethe-Zertifikat

Technical Environment

AI & LLM RAG architecture · Qdrant · LiteLLM · Langfuse · knowledge graphs (FalkorDB)

Agentic dev AI-assisted development · multi-agent orchestration · MCP tooling · agentic IDEs

Operations Jira · Confluence · incident management · SLA design · cost modelling · n8n

Engineering Python · Docker · Linux · ROS (field operations and debugging)

Open-Source Projects

opsflow AI-native investigation platform for technical operations. Converges tickets, alerts, and events into entity-aware investigations with hybrid retrieval and policy-bounded governance. Alpha, in active development. github.com/cgracia/opsflow

writeflow Multi-agent writing pipeline. Nine specialist agents collaborate through a structured workflow to produce professional communication. Working prototype. github.com/cgracia/writeflow
