EXPERIENCE

Korial (Energy Robotics GmbH)

Darmstadt, Germany

German robotics software scale-up (~100 employees) / Enterprise AI platform for autonomous industrial operations

Head of Customer Support

Jan 2024 – present

|            |                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SCALE      | Built and scaled a 24/7 global customer operations function from 1 to 11, handling 2,300+ customer tickets across a live fleet of ~100 safety-critical inspection robots spanning EMEA, APAC, and the Americas.                                                                                                                                                                                                               |
| LEVERAGE   | Delivered 24/7 follow-the-sun cover on a lean international team, designing the onboarding, documentation and escalation structure it depended on, and adding a Houston hire to close the Americas window.                                                                                                                                                                                                                    |
| PLATFORM   | Designed and shipped the AI platform running in production behind the support queue: automated investigation and context on every ticket with humans in the loop, over hybrid retrieval across vector search (Qdrant) and a knowledge graph (FalkorDB) spanning 11,500+ tickets, 1,300+ documents, and live fleet telemetry, with multi-model routing, an 8-dimension evaluation harness, and cost and quality observability. |
| GOVERNANCE | Owned the platform's AI governance, making autonomy something each capability had to earn: copilot-to-autopilot graduation gates, human-in-the-loop evaluation, and a CSAT kill switch on every route to production. Deliberately copilot-first for low-volume, safety-critical B2B support, with autonomous handling graduated only for out-of-hours cover. Its fleet scanner surfaced 80+ KPI anomalies a week for triage.  |
| THROUGHPUT | Absorbed a doubling of ticket volume across the support queue through the first half of 2026 with no increase in headcount, through AI-assisted triage, workflow automation, and knowledge and process redesign rather than hiring, reclaiming an estimated 10 hours of management time and 30+ hours across the team each week.                                                                                              |
| COMMERCIAL | Led the commercial analysis underpinning the company's GTM support pricing model: multi-scenario P&L modelling across SLA tiers, staffing models (Europe-only vs. Follow-the-Sun), and labour cost structures, directly informing pricing decisions and preventing launch of an unprofitable service tier.                                                                                                                    |

Operations Project Manager

Jan 2023 – Dec 2023

|          |                                                                                                                                                                                             |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DELIVERY | Ran the Human Robot Supervisor programme, delivering supervised robot operations for customers with the first two direct reports, owning customer and partner coordination for deployments. |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Robot Operations Engineer

Jan 2022 – Dec 2022

|            |                                                                                                                                                                                                                                                                |
|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FOUNDATION | Established customer support as its first and only member: front-line technical debugging of robot and deployment failures, direct customer contact through demos, deployments and partner coordination, and the first hand-built ticket-handling automations. |
|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Magazino GmbH

Munich, Germany

Robotics scale-up, autonomous mobile robots for intralogistics / Acquired by Jungheinrich

### Lead Robot Engineer

Dec 2019 – Dec 2021

#### FLAGSHIP

Owned the first TORU customer project as technical lead on site, taking it from a 3-robot pilot to a fully autonomous system handling 15,000+ orders per week.

#### PRODUCT

Initiated and authored the analysis of what was blocking operation of larger robot fleets, shaping a subsequent programme of product and reliability improvements.

### Robot Software Engineer

Nov 2018 – Dec 2019

#### FIELD

Acted as technical interface between customers and engineering, translating field failures into product and reliability fixes.

## ASTI Mobile Robotics

Burgos, Spain

Industrial robotics company specialising in AGVs / Acquired by ABB

### Control and Automation Engineer

Nov 2016 – Oct 2018

#### COMMISSIONING

Commissioned AGV systems on customer sites across manufacturing, food processing and logistics: designed and programmed the control software, and got it running in live production.

#### PRACTICES

Contributed to modernisation of development practices, introducing version control, coding guidelines, and Kanban-based workflows.

### INDA S.L.

Zaragoza, Spain

#### R&D Engineer

Sep 2015 – Sep 2016

Developed electrical hardware and embedded software for UAV prototypes at an early-stage startup.

### Certizar

Zaragoza, Spain

#### Co-founder & Energy Assessor

May 2013 – Aug 2015

Co-founded an energy certification practice serving 50+ customers/month at peak, driving acquisition through Google Ads, web and local advertising while managing customers, delivery and invoicing.

## OPEN SOURCE

#### PROFILE

Full and current index of projects: [github.com/cgracia](https://github.com/cgracia)

#### OPSFLOW

AI-native investigation platform for technical operations: converges tickets, alerts and events into entity-aware investigations with hybrid retrieval and policy-bounded governance. Alpha.

#### WRITEFLOW

Multi-agent writing pipeline: nine specialist agents in a structured workflow. Working prototype.

## EDUCATION

### MEng Industrial Engineering, Universidad de Zaragoza, Spain

Sep 2005 – May 2013

Engineering and Architecture School · Specialisation in Automation and Robotics

## LANGUAGES

#### SPANISH

Native

#### ENGLISH

Full professional proficiency / Cambridge English: Advanced (CAE)

#### GERMAN

Professional working proficiency / B2 Goethe-Zertifikat · assessed C1 2026, C1 course in progress
