github.com/cgracia

Operations leader with over a decade in industrial robotics and autonomous systems. At Korial, built and scaled a 24/7 customer operations function for an enterprise AI platform, and led the buildout of the AI platform behind it.

1 → 11	15+	0.4 h	~100
TEAM BUILT	SERVICES IN PRODUCTION	AVG FIRST RESPONSE	ROBOTS IN LIVE FLEET

STACK

AI & LLM	GenAI · LLM agents and tool use · RAG · Qdrant · LiteLLM · Langfuse · knowledge graphs (FalkorDB)
AGENTIC DEV	Agentic workflows · AI-assisted development · multi-agent orchestration · MCP tooling · agentic IDEs
OPERATIONS	AI adoption · Atlassian site admin (Jira, Confluence, JSM) · incident management · SLA design
ENGINEERING	Python · n8n · Docker · Linux · ROS (field operations and debugging)

EXPERIENCE

Korial (Energy Robotics GmbH)

Darmstadt, Germany

German robotics software scale-up (~100 employees) / Enterprise AI platform for autonomous industrial operations

Head of Customer Support

Mar 2024 – Oct 2026

SCALE	Built and scaled a 24/7 global customer operations function from 1 to 11, handling 2,300+ customer tickets across a live fleet of ~100 safety-critical inspection robots spanning EMEA, APAC, and the Americas.
LEVERAGE	Delivered 24/7 follow-the-sun cover on a lean international team, designing the onboarding, documentation and escalation structure it depended on, and adding a Houston hire to close the Americas window.
PLATFORM	Designed and shipped the AI platform running in production behind the support queue: automated investigation and context on every ticket with humans in the loop, over hybrid retrieval across vector search (Qdrant) and a knowledge graph (FalkorDB) spanning 11,500+ tickets, 1,300+ documents, and live fleet telemetry, with multi-model routing, an 8-dimension evaluation harness, and cost and quality observability.
GOVERNANCE	Owned the platform's AI governance, making autonomy something each capability had to earn: graduation gates from copilot to autopilot, human-in-the-loop evaluation, and a CSAT kill switch on every route to production. Deliberately copilot-first for low-volume, safety-critical B2B support, with autonomous handling graduated only for out-of-hours cover. Its fleet scanner surfaced 80+ KPI anomalies a week for triage.
THROUGHPUT	Absorbed a doubling of ticket volume across the support queue through the first half of 2026 with no increase in headcount, through AI-assisted triage, workflow automation, and knowledge and process redesign rather than hiring, reclaiming an estimated 10 hours of management time and 30+ hours across the team each week.
COMMERCIAL	Led the commercial analysis underpinning the company's GTM support pricing model: multi-scenario P&L modelling across SLA tiers, staffing models (Europe-only vs. Follow-the-Sun), and labour cost structures, directly informing pricing decisions and preventing launch of an unprofitable service tier.

Operations Project Manager

Jan 2023 – Feb 2024

DELIVERY	Ran the Human Robot Supervisor programme, delivering supervised robot operations for customers with the first two direct reports, owning customer and partner coordination for deployments.

Robot Operations Engineer

Jan 2022 – Dec 2022

FOUNDATION	Established customer support as its first and only member: front-line technical debugging of robot and deployment failures, direct customer contact through demos, deployments and partner coordination, and the first hand-built ticket-handling automations.

Magazino GmbH

Munich, Germany

Robotics scale-up, autonomous mobile robots for intralogistics / Acquired by Jungheinrich

Lead Robot Engineer

Dec 2019 – Dec 2021

FLAGSHIP Owned the first TORU customer project as technical lead on site, taking it from a 3-robot pilot to a fully autonomous system handling 15,000+ orders per week.

PRODUCT Initiated and authored the analysis of what was blocking operation of larger robot fleets, shaping a subsequent programme of product and reliability improvements.

Robot Software Engineer

Nov 2018 – Dec 2019

FIELD Acted as technical interface between customers and engineering, including Zalando, Fiege, ASICS and Lloyd Shoes, translating field failures into product and reliability fixes.

ASTI Mobile Robotics

Burgos, Spain

Industrial robotics company specialising in AGVs / Acquired by ABB

Application Engineer

Nov 2016 – Oct 2018

COMMISSIONING Commissioned AGV systems on customer sites across manufacturing, food processing and logistics: designed and programmed the control software, and got it running in live production.

PRACTICES Contributed to modernisation of development practices, introducing version control, coding guidelines, and Kanban-based workflows.

INDA S.L.

Zaragoza, Spain

R&D Engineer

Sep 2015 – Sep 2016

Developed electrical hardware and embedded software for UAV prototypes at an early-stage startup.

Certizar

Zaragoza, Spain

Co-founder & Energy Assessor

May 2013 – Aug 2015

Co-founded an energy certification practice serving 50+ customers/month at peak, driving acquisition through Google Ads, web and local advertising while managing customers, delivery and invoicing.
