

Operations leader with over a decade in industrial robotics and autonomous systems, currently Head of Customer Support at Korial. Built and scaled a 24/7 customer operations function for an enterprise AI platform, and led the buildout of the AI platform behind it.

STACK

AI & LLM	RAG architecture · Qdrant · LiteLLM · Langfuse · knowledge graphs (FalkorDB)
AGENTIC DEV	AI-assisted development · multi-agent orchestration · MCP tooling · agentic IDEs
OPERATIONS	Jira · Confluence · incident management · SLA design · cost modelling · n8n
ENGINEERING	Python · Docker · Linux · ROS (field operations and debugging)

EXPERIENCE

Korial (Energy Robotics GmbH)

Darmstadt, Germany

~20 to ~100+ employees / Enterprise AI platform for autonomous industrial operations

Head of Customer Support

Jan 2024 – present

SCALE	Built and scaled a 24/7 global customer operations function from 1 to 11, handling 2,300+ customer tickets across a live fleet of ~100 safety-critical inspection robots spanning EMEA, APAC, and the Americas.
LEVERAGE	Delivered 24/7 follow-the-sun cover on a lean international team, designing the onboarding, documentation and escalation structure it depended on, and adding a Houston hire to close the Americas window.
PLATFORM	Designed and shipped the AI platform running in production behind the support queue: automated investigation and context on every ticket with humans in the loop, over hybrid retrieval across vector search (Qdrant) and a knowledge graph (FalkorDB) spanning 10,000+ tickets, 1,300+ documents, and live fleet telemetry, with multi-model routing, an 8-dimension evaluation harness, and cost and quality observability.
GOVERNANCE	Governed the platform’s route to production with copilot-to-autopilot graduation gates, a CSAT kill switch, and human-in-the-loop evaluation: a deliberately copilot-first design for low-volume, safety-critical B2B support, with autonomous handling graduated only for out-of-hours cover. Surfaced 80+ fleet anomalies per week.
THROUGHPUT	Absorbed a doubling of ticket volume across the support queue while headcount grew by one, through AI-assisted triage, workflow automation, and knowledge and process redesign rather than proportional hiring, reclaiming an estimated 10 hours of management time and 30+ hours across the team each week.
COMMERCIAL	Led the commercial analysis underpinning the company’s GTM support pricing model: multi-scenario P&L modelling across SLA tiers, staffing models (Europe-only vs. Follow-the-Sun), and labour cost structures, directly informing pricing decisions and preventing launch of an unprofitable service tier.

Operations Project Manager

Jan 2023 – Dec 2023

DELIVERY	Ran the Human Robot Supervisor programme, delivering supervised robot operations for customers with the first two direct reports, owning customer and partner coordination for deployments.
----------	---

Robot Operations Engineer

Jan 2022 – Dec 2022

FOUNDATION	Established customer support as its first and only member: ran customer demos, coordinated deployment logistics with partners, and hand-built the first ticket-handling automations.
------------	--

Magazino GmbH

Robotics scale-up, autonomous mobile robots for intralogistics / Acquired by Jungheinrich

Munich, Germany

Lead Robot Engineer

Dec 2019 – Dec 2021

FLAGSHIP Owned the first TORU customer project as lead technical responsible on site, taking it from a 3-robot pilot to a fully autonomous system handling 15,000+ orders per week.

PRODUCT Initiated and authored the analysis of what was blocking operation of larger robot fleets, shaping a subsequent programme of product and reliability improvements.

Robot Software Engineer

Nov 2018 – Dec 2019

FIELD Acted as technical interface between customers and engineering, translating field failures into product and reliability fixes.

ASTI Mobile Robotics

Industrial robotics company specialising in AGVs / Acquired by ABB

Burgos, Spain

Control and Automation Engineer

Nov 2016 – Oct 2018

CONTROL Designed and deployed AGV control software across manufacturing, food processing, and logistics environments.

PRACTICES Contributed to modernisation of development practices, introducing version control, coding guidelines, and Kanban-based workflows.

INDA S.L.

Early-stage UAV startup

Zaragoza, Spain

R&D Engineer

Sep 2015 – Sep 2016

HARDWARE Electrical hardware and embedded software for UAV prototypes.

OPEN SOURCE

OPSFLOW AI-native investigation platform for technical operations: converges tickets, alerts and events into entity-aware investigations with hybrid retrieval and policy-bounded governance. Alpha.
